BiznessAPPS

# A deep dive into Product Issues...

# How we are addressing stability issues?

- We divided the problems into two categories: Outages & Customer Defects
- Each category was further divided into several buckets.
- We analyzed each bucket before creating a Heal Plan for Q3 and Q4.
- We are tracking progress every week.

# Outages: Breakdown

30%

Caused by lack of proper test plan coverage. (43 defects.) We will fix them by writing missed Test Cases for "Push Notification", "Group Push notification", "Geofence" Functional Areas. All end-to-end scenarios are written.

20%

Caused by manual errors during deployment to production. We will automate CI/CD and update the runbooks to prevent such errors in the future.

20%

Caused by confirmed Verizon CDN outages. We checked cache handling on our side and we confirm the RC was a Verizon outage. We will fix it by moving to AWS CloudFront CDN.

10%

Caused by expired certificates. We will fix by extending our test plan to test certificate expiration and setup monitoring to trigger renewal.

10%

Caused by DB infrastructure failures. We are running on a non-Centralized Maria DB instance. We will fix those outages by moving to centralized Aurora DB

10%

Caused by regressions. We will fix it by improving test plan - write missed tests to cover regressions.

# Customer Defects: Breakdown

35%

Caused by lack of testing on real devices. We will fix it by using hardware labs, using browser stack and implementing IOS GPS simulation (geofence) for testing.

15%

Leaked to production due existing tests weren't included into release test plan. We will fix it by increasing test automation by 10% each quarter.

10%

Are still in triage. We will take actions based on the results of the triage.

10%

Are new feature requests. We will address them with PM.

15%

Appear to be duplicates or report "functions as designed" behavior. We will work with Central Client Support org to ensure each case has a KB.

8%

Are caused by testing on a limited dataset. We will fix them by anonymizing & testing with client dataset.

7%

Are caused by credits and publishing defects. We will fix credit defects and automate iOS publishing.

An even deeper dive into  
Specific Issues & the Heal Plan...

# Heal Plan: Product Issues

Problem	Root Cause	Fix	ETA
Unpredictable Push Notifications	Bugs and lack of complete geo-testing	Fixed bugs and adding more tests, more tools to geo-simulate	August
Images Disappearing	Verizon Content Delivery Network (CDN) buggy	Replace with Amazon CDN	DONE
Can't publish Android Apps	Internal certificates expired	Better certificate management	DONE

# Heal Plan: Product Issues *(...continued)*

Problem	Root Cause	Fix	ETA
<b>Analytics not appearing and Custom Domain issues</b>	Code deployment issues	Better Process	August
<b>iOS Publishing failure</b>	Manual steps are needed	Fully Automated	Q4
<b>General</b>	Lack of testing with real data	Use anonymized real-world data for testing	September
<b>Slowness in User Management with 500+ users</b>	Performance issues	Refactor	Q4

# Heal Plan: Status

## Healing plan completion

## Outages and uptime

## Customer Defects and Regressions

## RCAs completion

## Test Plan completion

# Push Notes: Current State

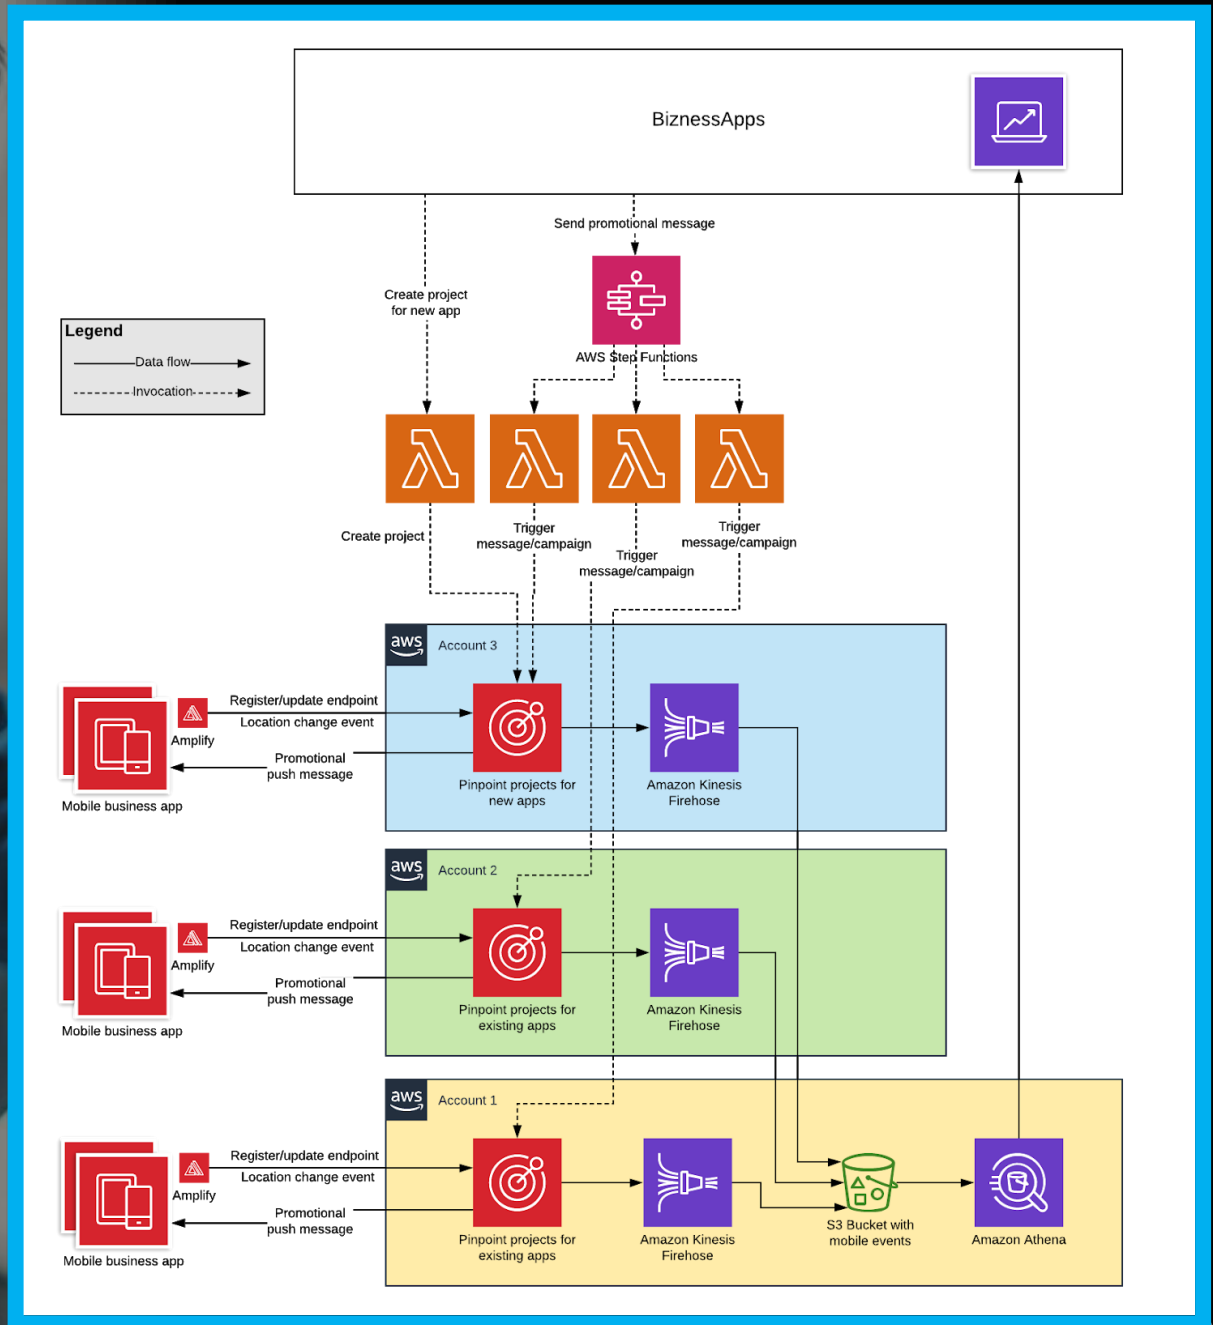

- **History:** Broke while doing GDPR
- **Android:** Stable for a long time
- **iOS:** Stable now, confirmed by high-volume customers:
  - Using low-battery APIs
  - Geofence working as well
- **Improved Testing:** Adding more tools to test Geofence scenarios

# Push Notes: Plan for 2020

✓ New  
Architecture

✓ Uses AWS  
Pinpoint

# Product Update – 50.15.4 Released

## iOS

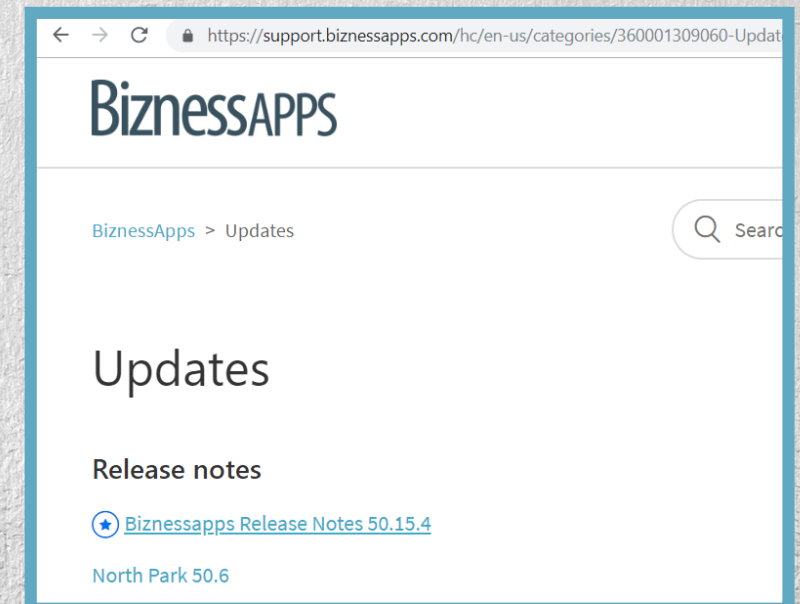

- Push Notifications
- Events
- Loyalty

## CMS

- Push Notifications
- Manage Customers
- Group Management

## Android

- Push Notifications

- Walkthrough
- App Crash
- Loyalty
- Website

# Product Update: Android 64-bit Support

[Google Play](#) > Guides

## Support 64-bit architectures

Starting **August 2019**, your apps published on Google Play will need to support [64-bit architectures](#). 64-bit CPUs deliver faster, richer experiences for your users. Adding a 64-bit version of your app provides performance improvements, makes way for future innovation, and sets you up for devices with 64-bit-only hardware.

This guide explains the steps you can take today in order to ensure that your 32-bit app is ready to support 64-bit devices.

### Assess your app

---

If your app uses only code written in the Java programming language or Kotlin, including all libraries or SDKs, your app is already ready for 64-bit devices. If your app uses any native code, or you are unsure if it does, you will need to assess your app and take action.

Status: Ready in a day or two

# Updated: Content Delivery Network

- From Verizon to Amazon CloudFront
- Same tool used by Hulu, Prime Video, Slack, etc.
- Fixes 'disappearing images' issues

# Upcoming Release: v50.15.5

Fixing "Email  
already in use"  
sign-up error in  
Android

64-bit  
Android

A long-exposure photograph of the Golden Gate Bridge at night. The bridge's iconic orange-red structure is illuminated, with light trails from traffic creating a bright, continuous line across the span. The bridge stretches from the foreground on the left towards the right, where the second tower is visible. The background shows the San Francisco city skyline with numerous lights reflecting on the water under a deep blue twilight sky.

# Support: We need to improve

The coverage has improved, and we are set up for long-term success. However, resolution times have increased.

# The Plan to Improve Support

1. Weekly analysis done on each ticket that breaches our resolution time quality bar
2. Knowledge gaps identified
3. Training material produced and rolled out to Support Agents
4. This program will drive continuous improvement

# New: Status Page

# Getting Started with PRIME

## 3 Easy Steps

### Step #1

Go to [prime.think3.com](https://prime.think3.com). Or, either reach out to your Partner Success Manager, or contact us at: [success@businessapps.com](mailto:success@businessapps.com).

### Step #2

We will set up a quick discovery call to consult on your various options. We will then schedule a personalized demo so you can learn how each solution would work for your team's specific needs.

### Step #3

When you're ready to get started, a PSM will lead your onboarding and ensure a successful launch.

A modern office setting with a whiteboard mounted on a concrete wall. The whiteboard displays the text "Prime Poll: What is keeping you from launching Bizness Apps Prime?". Below the whiteboard is a wooden desk with a laptop, a potted plant, a plate of food, and a cup of coffee. A large potted plant is visible on the left side of the frame.

Prime Poll:

What is keeping you from  
launching Bizness Apps Prime?

Q&A

# Thank You!
